This Issue: Ride In Style With Kee Lite®

Kee Lite Part of Smart Solution for Contractor

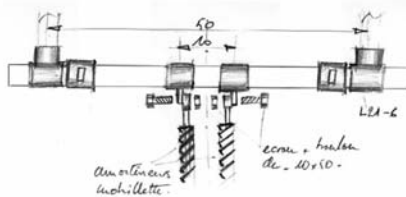

In the course of a normal day, contractors find they must transport a wide variety of materials to a job site. Because you can build almost any pipe configuration using Kee® fittings, the truck rack shown is a custom fit and good looking too. Kee Lite fittings are used as bases for the uprights, and Kee Klamp® fittings are used for elbows and crossovers. Kee Lite fittings are made of aluminum, have a stylish look, and withstand a vigorous workday. No more wire and duct tape to hold your truck rack together – Kee Lite and Kee Klamp fittings use the simple hex set screw method to securely lock fittings onto the pipe. BoxBolt™, an expansion anchor for use with steel, is used to secure the base fittings to the vehicle. BoxBolt is available from the BeamClamp Division of Kee Industrial Products. Design assistance is currently available for the truck rack, and detailed plans and parts list will be available soon.

Above: Use of Kee Lite L62 fittings for upright bases give a stylish look. Gaskets like the one shown are available for Kee Lite base fittings.

Global Transportation - Brouette Tout Terrain!

We send our sincere thanks to Vincent Robine who resides in Brest, France for sending photos and project details of his recent endeavor. Vincent recently entered a contest in France sponsored by a large home improvement chain calling for do-it-yourself dads to build a project to make life easier for a handicapped child. Vincent's project, called Brouette Tout Terrain, is an all terrain vehicle for fun transport. Vincent constructed it using Kee Lite fittings, and has even included devices to act as shock absorbers and a seat belt. One of Vincent's hand drawings is shown at right.
